a.k.a. Shiya the Player

INTERACTION DESIGN · DIGITAL MEDIA · AI IMMERSIVE MEDIA CONTENTS

APPLICATION	Graduate study, Hongik University, Seoul
INTAKE	[TO CONFIRM: intake year / semester]

STATEMENT

Small worlds, started from a feeling and a line of text.

I am a third-year undergraduate in Sports Economics and Management at Beijing Sport University. Image-making is not what I am studying — it is what I taught myself: AI art, 3D, motion and interaction.

Every project starts from a feeling or a line of text, then moves through whichever tools fit it: a generated 3D model, an illustration, a node graph that pushes pixels into particles.

My degree is about how sport becomes an industry — audiences, communities, merchandise. BLING, the product study in this portfolio, sits where that meets aesthetics.

I am applying to work in AI immersive media: to move from pieces that are watched to worlds that can be entered and shaped. **[TO CONFIRM: one or two sentences in your own words — why Hongik, why now]**

EDUCATION	Sports Economics and Management, Beijing Sport University — third year. **[TO CONFIRM: degree title, expected graduation]**
PRACTICE	AI art · 3D · Motion · Interaction
TOOLS	Blender, Tripo AI, TouchDesigner, After Effects, DaVinci Resolve, CapCut, Illustrator, Photoshop, Midjourney, HTML/CSS/JS
LANGUAGES	**[TO CONFIRM: languages and test scores, e.g. TOPIK / IELTS]**

“Creation doesn’t only move from nothing to something. It can move from many to few, from now to later, from never-existed to existing.”

Three case studies, then a short index of other work.

CASE STUDY 01 · PRODUCT / INTERACTION

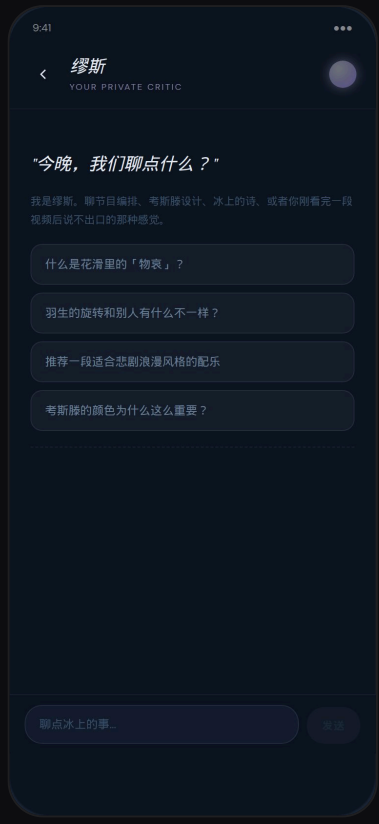

BLING

A figure-skating aesthetics app, with a private critic named MUSE.

TYPE	Product concept and working front-end prototype
ROLE	Independent — concept, interface, copy, front-end build
YEAR	[TO CONFIRM: year and duration]
BUILT WITH	HTML · CSS · JavaScript (no framework), Cloudflare Pages

Home — "Today's pick" hero, soundtrack strip, MUSE and year-in-review entries

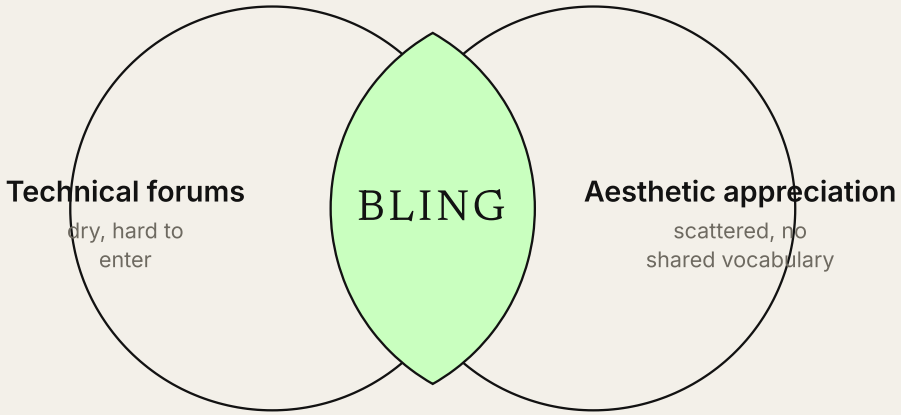

MUSE — "Tonight, what shall we talk about?"

01 PROBLEM

Figure-skating content splits in two.

Technical forums are dry and hard to enter. Aesthetic appreciation is scattered across reposts, with no shared vocabulary.

Neither treats a blade's arc as geometry and a costume's drape as narrative at the same time.

QUESTION

Can one product hold both — and make the sport's visual language something you can learn, discuss and even wear?

CONCEPT

BLING is organised around five ways people actually engage with the sport: learning its visual language, following individual skaters, understanding specific programs, talking with others, and finally owning a piece of it.

It is built as a small, opinionated magazine that happens to update — not a feed.

01	02	03	04	05
Aesthetics	Athletes	Programs	Community	Merchandise
美学	运动员	节目	社区	周边

[TO CONFIRM: early sketches, wireframes or references that led to this structure]

02 SYSTEM · STRUCTURE

Five pillars, seventeen screens.

The five pillars on the home screen map onto the screens a visitor actually moves through. Reading, asking, listening and joining all lead toward the same destination: turning appreciation into something physical.

The prototype has no backend. State — favourites, cart, notes, comments — lives in the browser, and checkout is simulated.

PILLAR	SCREENS BUILT
Aesthetics 美学 · Learn the visual language	Articles · editor's picks · trends Discover 发现
Athletes 运动员 · Follow individual skaters	Athlete profiles e.g. Yuzuru Hanyu, Alysa Liu
Programs 节目 · Understand a performance	Program page · soundtrack player costume inspirations
Community 社区 · Discuss with others	Posts · comments · follow compose an article or a private note
Merchandise 周边 · Own a piece of it	Shop · cart · checkout (simulated) music print customiser

ACROSS ALL PILLARS

MUSE critic · Favourites 收藏 · Profile 我的 · BLING ARC year in review

Information architecture of the prototype. Bottom navigation: Home · Community · Discover · Merch · Favourites · Me.

03 SYSTEM · THE AI COMMENTATOR

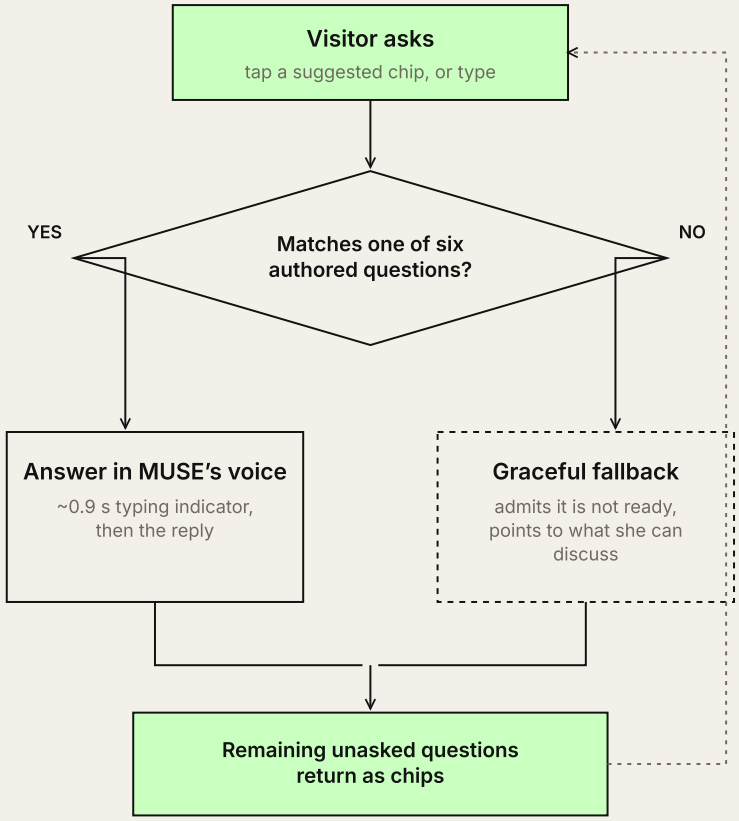

MUSE is a critic with a point of view, not a chatbot.

MUSE only talks about figure-skating aesthetics, in a consistent vocabulary — “mono no aware”, “the poetics of gravity” — instead of encyclopedic answers.

In the current build MUSE answers from six pre-written question-and-answer pairs, with a typing delay and follow-up chips for the questions not yet asked. Inference cost was not justified for a personal project, so the design work went into defining who MUSE is: her tone, her opinions, the limits of what she will discuss.

That definition is what would become the system prompt and few-shot examples if a live language model were connected later.

INTERACTION LOGIC (AS IMPLEMENTED)

An answer, then the next prompts. Question shown: “What is mono no aware in figure skating?”

04 SYSTEM · COMMUNITY AND DISCOVERY

Specific posts set the tone for specific writing.

The community tab is built from opinionated posts rather than generic updates. Captions such as “why does Yuzuru’s spin make me unable to breathe” set the register on purpose, nudging people to write with the same specificity instead of leaving vague reactions.

Discover adds an editorial layer on top: weekly features, trending topics and curated long reads — less a feed, more a small magazine.

Readers can like, comment, follow, save favourites, and write either a public article or a private note.

社区
Community — posts with tags, likes, comments

发现
Discover — editor’s pick, trending topics, long reads

节目
Program page — today’s soundtrack and the costume inspirations drawn from it

05 SYSTEM · FROM APPRECIATION TO OWNERSHIP

Music print customisation.

A favourite program soundtrack becomes an abstract print on a physical product. The flow is five steps: choose a program, read its mood, generate a print, choose a product, preview and confirm.

Each program ships with an authored palette and mood tags; the print itself is generated in the browser from a random seed — soft blobs, ellipses and arcs in that palette (one program, Delulu, uses supplied artwork). It is a prototype of the idea, not audio analysis or a trained model.

01 CHOOSE A PROGRAM
选择节目

02 READ ITS MOOD
氛围解析

03 GENERATE A PRINT
生成印花

04 CHOOSE A PRODUCT
选择单品

05 PREVIEW AND CONFIRM
预览确认

Six programs · six product types (T-shirt, hoodie, trousers, canvas shoes, tote, phone case) · the confirmed item goes to the cart.

06 OUTCOME AND REFLECTION

A working prototype of a whole product loop.

17	6	6	5
screens	authored MUSE answers	soundtrack programs	step print flow

Counted from the BLING repository.

Built and deployed independently as a test of whether “art × tech × subculture” can hold up as a real product.

WHAT THE PROTOTYPE DOES NOT DO YET

- MUSE does not call a live language model.
- Nothing persists between sessions, and payment is simulated.
- Prints are generated procedurally; they do not analyse audio.
- No user testing is documented. [TO CONFIRM: any feedback from real skating fans]

Year-in-review entry (“Your ice archive”)

REFLECTION

[TO CONFIRM: what you learned from building BLING, and what you would test or change next — in your own words]

Screens include third-party athlete photographs and a commercial soundtrack as placeholders. [TO CONFIRM: usage rights, or replace before submission]

CASE STUDY 02 · GRAPHIC DESIGN / ILLUSTRATION

The world is my playground

An oyster that holds not a pearl, but an entire Earth.

TYPE	Illustrated poster / composite
TOOLS	Adobe Illustrator, Photoshop
YEAR	[TO CONFIRM: year]
FORMAT	[TO CONFIRM: original size / intended use]

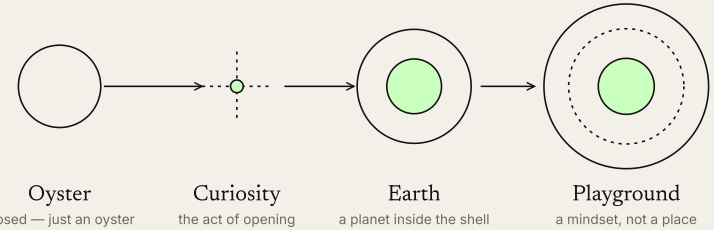

01 QUESTION AND CONCEPT

What if “the world is my oyster” was about play, not conquest?

The idiom reads as ownership. I wanted it to read as curiosity. Without curiosity, an oyster is just an oyster; with it, the inside can be a whole planet — a place to play, to discover, to live differently.

The amusement park, then, is not a place but a mindset. When we choose wonder over routine, the entire Earth turns into a playground.

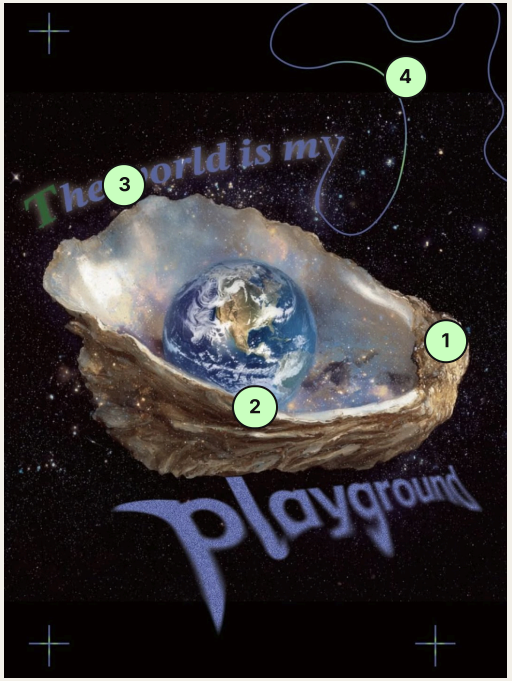

“When I open the oyster, I become both the explorer and the visitor — the one who enters a world made for curiosity.”

Scale breaks reality for a moment: a tiny oyster holds a world, and weightlessness is the mind reacting to scale.

02 MAKING

Illustrated, then composited.

The piece was illustrated in Illustrator, then composited and finished in Photoshop. The notes on the right read the finished image layer by layer.

1. **Starfield ground.** A dark, grainy sky gives the oyster a place to float — weightlessness as the starting condition.

2. **Oyster and Earth.** The shell is the most tactile element; the planet sits inside it like the pearl it replaces.

3. **Type that drifts.** The title bends around the object in two voices — a serif for “The world is my”, a soft blurred script for “Playground”.

4. **Line and registration marks.** A single looping line and small crosshair marks keep the surface feeling drawn, not just photographed.

[TO CONFIRM: sketches / first compositions]

[TO CONFIRM: references and image sources — the Earth, oyster and starfield need credits]

[TO CONFIRM: iterations — what changed between versions]

REFLECTION

[TO CONFIRM: what this piece taught you, and how it connects to immersive work — in your own words]

CASE STUDY 03 · AI ART / 3D ANIMATION

Narrative visual series

A line of text becomes a short image or animation.

PIECES	Eight, shown here (more on the live site)
MEDIA	AI art and 3D animation
METHOD	Start from a written seed — a poem, a myth, a label, a memory — then find the image
YEAR	[TO CONFIRM: year(s)]
TOOLS	Psyche and Cupid: [TO CONFIRM: AI tool]. Others: see the process study, [TO CONFIRM: tools per piece]

01 THE SEEDS

Eight pieces, eight lines.

Each piece's own words — the starting point for the image.

"In the parallel world, Cupid is stripped of his godhood by Zeus, and Psyche never becomes a goddess. The end of their life is no longer his kiss, his rescue — it is the two of them at the cliff's edge, looking out at the border between the mountains and the sea."

PSYCHE AND CUPID

Psyche and Cupid
AI art
Cupid is stripped of his godhood; Psyche never becomes a goddess.

black sand rite
3D animation
Mist seals the cross, waves swallow black sand — the blade rises as offering.

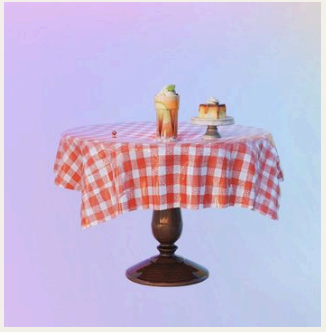

Akarsz-e játszani?
3D animation
Will you, will you — play at death with me?

FRAGILE
3D animation
DO NOT INVERT. DO NOT IMMERSE. DO NOT WAKE.

사랑의 맛 love's taste
3D animation
Self-immolation, once the lighter is lit.

exclusive summer
3D animation
We live through countless summers we can never return to.

roses of transcendent love
3D animation
The violent rose of ruined and transcendent lovers.

black funeral
3D animation
Of all I have lost, I miss myself the most. Here, I bury me.

02 TEXT TO IMAGE

AKARSZ-E JÁTSZANI? · 3D animation

Akarsz-e élni, élni mindörökkön,
játékban élni, mely valóra vált?
Virágok közt feküdni lenn a földön,
s akarsz, akarsz-e játszani halált?

Kosztolányi Dezső, "Akarsz-e játszani?" (1912)

The poem is quoted in full on the piece's page, with an English rendering: "Will you live, live forever and ever, live inside a game that has finally come true?"

Borrowed words, then my own.

ROSES OF TRANSCENDENT LOVE · 3D animation

Eye in a trance silent mirror
As I approach I depart
Buoy in the battlements
The violent rose
Of ruined and transcendent lovers.

Inspired by René Char, "The Violent Rose"

Her own paragraph follows the epigraph: a buoy straining to hold the breakwater's stones, "wrapped in metal chains, blooming quietly beneath the starry sky".

03 PROCESS STUDY · CORAL DREAM

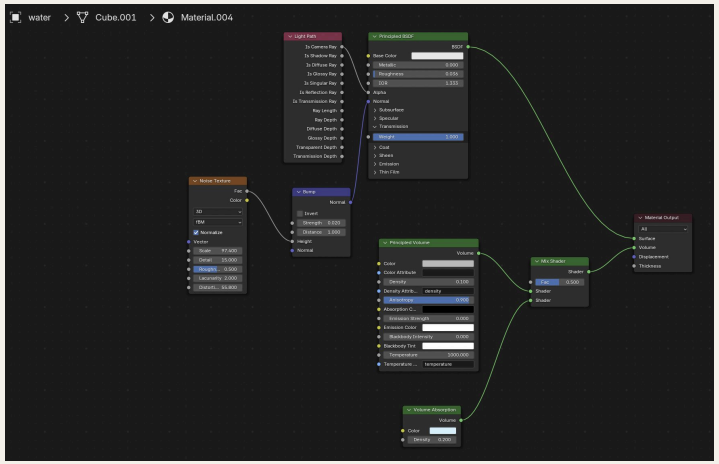

Water as two shaders, bubbles as a particle system.

The dream begins with falling — deep into the sea — then dragging myself toward the surface, and there it was: a reef. This is the one piece of the series where the working files are documented.

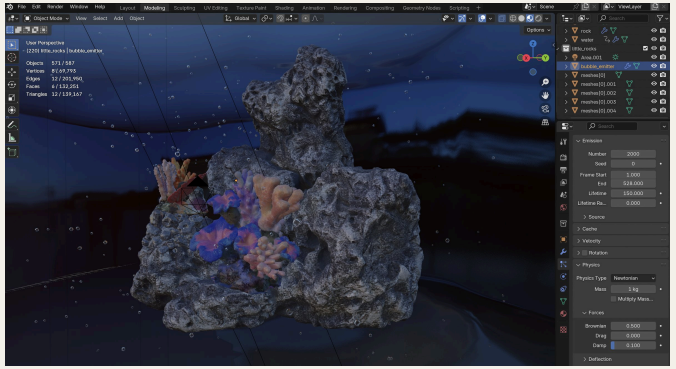

The water is two shaders stacked. A surface shader — Principled BSDF with low roughness and water's IOR of 1.333 — handles reflection and refraction, with a noise texture driving a bump map instead of real wave geometry. A volume shader beneath it supplies the murk: high anisotropy scatters light forward, and a separate absorption pass blues and darkens it with depth.

Keeping surface and volume as two shaders made it possible to tune how murky the water feels without touching the reflections.

Bubbles are a Blender particle system: 2,000 emitted over the shot, with Brownian motion so they drift and jitter on the way up.

Shader graph — surface (bump from noise) mixed with a volume (scatter + absorption)

Viewport — rocks, coral and the bubble emitter (2,000 particles, Brownian 0.5)

Coral dream — final frame

REFLECTION

[TO CONFIRM: what connects the pieces in this series, and what you would push further — in your own words]

04 INDEX · OTHER WORK

Other work.

05 TECHNICAL STUDIES

Three small pipelines.

heart of empire

3D animation

heart of empire — final frame

Modeled in Tripo AI, brought into Blender for animation and lighting, graded in DaVinci Resolve and cut together in CapCut.

limited night

Real-time · TouchDesigner

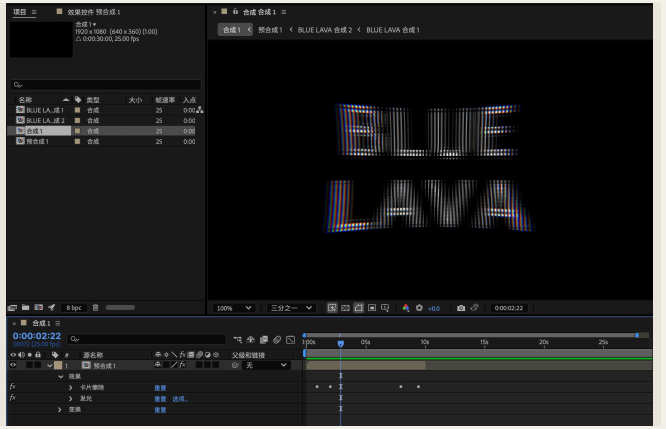

TouchDesigner network

A real-time network that turns 2D video into a field of 3D particles — each pixel's brightness pushed into height. A feedback loop adds trailing motion; downsampling the source before converting it to data brought the frame rate back to a steady 60 fps.

blue lava

Motion · After Effects

After Effects composition

A CRT-glitch look built only from After Effects' stock effects: Card Wipe for phosphor-grille strips, separated RGB channels for fringing, a noise displacement for break-up and Glow to blend it back.

CONTACT

Let’s build something impossible together.

Installations, rides, and playgrounds for strangers to leave light for one another.
